

Supplementary Fig 4A: Colonisation of ECC in different organs of mice on IP injection. Mice were injected with 8.1×10^5 CFU/mouse of ECC (dotted line). Mouse 3 cleared the infection, while low level of infection was observed in mice 1 and 2.

Supplementary Fig 4B: Colonisation of ECC in different organs of mice on IP injection. Mice were injected with 4.67×10^6 CFU/mouse of ECC (dotted line). All mice developed signs of clinical score with required level of bacterial colonisation in all vitals.
